#### WARNING:

- **The GCODE files, contained within the ZIP File, are mainly adapted for the Anycubic Viper 3D Printer, thus be careful when trying to launch the print on a foreign 3D printer!**

#### TIPS & TRICKS:

1. Print the Main Book Piece (Mini Book.stl) on the side for a better print result overall, and most importantly **don't forget to enable supports and set it to a 20% infill** (As shown in one of the images).
2. On all the pieces besides the Main Book Piece (Presented above), **don't forget to disable supports** for a better print.
3. Finally, for the Text Plane Piece (Text Plane.stl), the letter holes can be easily created using the 3D Letters Tool and the Intersect with Model function in Sketch Up.

## Model files

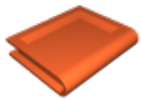

**mbinside-pt1.stl**

**mbinside-pt2.stl**

**mini-book.skp**

**mini-book.stl**

**text-plane.stl**

## Other files

**gcode-zip.zip**
