This is a phone mount HUD that I designed that holds my iPhone while running the SimHub app for the telemetry. This fit my needs and won't be modifying this unless I get a new phone that won't fit the brackets.

It takes 2 M4x16, 4 M4X6, AND two M4 nuts. The inner shroud will need a little super glue to hold it to the outer shroud.

For personal use only. I don't want to see this on Etsy or Cults for you to make money off of my design (hence the logo's built into the pieces).
