### Summary

Simple mounts for holding medium and mini breadboards

[Hobby & Makers](#) > [RC & Robotics](#)

Tags: [mount](#) [breadboard](#) [xrrobotics](#)

This model is for the XRP robot contest. It is a simple mounting system that allows the XRP robot to hold a standard or mini breadboard. I tried to design it so that it could hold breadboards with different shaped or sized connecting pins, but its not perfect.

#### How to use:

Step 1: If your breadboard has a sticky pad on the bottom, use that to stick the breadboard to the mounting plate.

Step 2: Clip the mounting plate to the outside rail on the XRP robot.

Enjoy!
