Summary

My pothos were getting too viney and I wanted a way to prop up the cuttings using my abundance of empty Oui yogurt jars.

A simple model to prop up plant cuttings! Use it with empty Oui yogurt jars. The lid fits in loosely into the top. I printed it on the Bambu textured PEI plate with a 0.1x0.1 fuzzy skin and 10% gyroid infill.

I welcome your ideas on how to improve this model! I want to make a pressure-fit version next.
