#### Made to be used with **Magnetic PTFE coupler**

Hooked up my 2 spool filament dry box if you print anything tall, a hard mounted mount might jam from the extreme angle of filament so i made this thing to move along with the print head so far it's done me pretty well though I also haven't printed anything tall yet so I'll let you guys be the judge

Please let me know if there's any alterations I should make I have supplied you guys with a .STEP file so you guys can **make it your own**
