## Summary

I used it for education on Chain drive.

[Learning](#) > [Engineering](#)

When teaching robotics, it was necessary to teach about chain drives. This chain can be used in places where the load is low. If wear is a concern, we recommend using highly durable PLA resin or PET resin.

The fastening structure was intentionally kept simple. M3-20 or M3-25 bolt and nut are used. The nuts and bolts are secured using Loctite or Super Glue.

If you connect the links to make a loop, you can attach a carabiner. I think it would be cute to make links in different colors.
