I started the LEGO world map and got frustrated by the many piles of the little 1x1 tiles and stud plates. So I set out to design a bespoke solution to keep the parts separate and easy to store since I work on each section occasionally and wanted to store it in my desk drawer.

The 2-10 trays have a sloped side to help get the tiles out and to prevent trapping in a hard corner. The sample Stud is LEGO standard by the clutch power was zero in my print, I just glued the tiles on to keep them there. the lid is friction fit and you cannot turn the tray upside down with the lid on.
