This is a remake of Debren27's awesome model:

<https://www.printables.com/model/304326-bambu-build-plate-holder-with-2-8-tapered-slots-op>

I completely redrew it, but all dimensions except for the width to hold more build plates of course and the thickness of the tongue, are the same. I increased the tongue thickness from 1.6mm to 2mm so it fits more snug under the Eibos Polyphemus Filament dryer.

You will need a printer with a big print bed (at least 311mm when you print diagonally).

This version has the hexa-grid drawn in.  
No need to play with infill and layer heights. Just print..

(Will take some time though.)
