### Summary

a d20 in the 'sharp' style rather than rounded edges, designed for resin printing a dice master

[casting](#)

I wanted to make a D20 with a custom logo to use as a dice master for epoxy casting. Since my name starts with an S I figured I might as well just make a cool S dice.

It is numerically balanced, opposite sides add up to 21. I attempted to center and adjust the text as much as possible, but I am not very good at Cad and I did the best I could.

I really don't like the normal 'sharp' 6 and 9 with the huge dot, so I tried to make it less intense.

This file is really designed for resin printing. I doubt you'll be able to get good detail on a normal printer, but I encourage you to try it out.
