Based on community feedback there were people wanting to fit thicker 80mm fans on the rear of the ZimaCube. Most commonly 80x25mm Noctua fans.

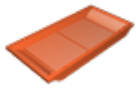

I took inspiration from the ZimaCube and the ZimaBoard to create this fan cover. It will allow you to changeout your fans and keep them protected. The part attaches to the ZimaCube with 4 6mm Diameter x 3mm thick neodinium magnets that press fit into the print for easy removal and cleaning.

will JUST about fit on an Ender 3 if you use the whole bed (print is 233mm on the longest)

I printed grille side on the print bed with no support in PETG but might work better with supports.
