Summary

This model lets you mount your Logitech C920 webcam on your monitor.

Tags: [holder](#) [webcam](#) [monitor](#) [logitechc920](#)

The Webcam can be mounted on my model with its original holder (in the folded position). The Webcam can now tilt up and down and turn 360°. This is very useful when using a monitor light bar or any other reason the webcam can't be placed in the middle of your monitor.

My monitor is about 20mm thick and it fits perfectly. If your monitor is different you probably need to modify the model (step file)

I printed mine in PETG with 0.16 layer height. You need some sort of glue or double-sided tape to assemble everything.
