new version is 30% smaller with no threaded inserts and less screws.

Parts

M3x4 Bolts	2
M3x12 Bolts	5
Printed parts	1
GB Operator	1

I am not getting into how it's assembled since it is straightforward, but there are three things to look out for.

The first and crucial step is to assemble the PCB into the print without tearing the ribbon cable. Careful handling is crucial in preventing damage.

Second, ensure the stencil is flush on the top with the printed pegs inside the vent and back before adding the holes to the back plate; you should drill halfway, then take it off to drill all the way through.

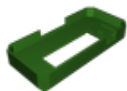

The third thing is to watch this video on how to set up the epilogue player on the Steam deck. You should also play around with the Emudecky power tools.
