T-Rex HitchCover got wrecked, so I needed a new one.

For spreading sweet liberty I bring you the HellDivers Helmet HitchCover, remixed the blank cover I made of the T-Rex cover with the Helmet.

Placed on the Bottom it needs very little supports, I had printed the one on the photo with Tree slim, only on build plate and critical regions only with a fair result, concerning it is supposed to be a HitchCover.

Printed it with Bambu ABS GF, gets a nice finish.

I drilled two hole in the back to secure it on the Hitch with a cable strap, will make another picture of that.

Enjoy!
