Design

- [my shop was missing part #3](#)
- [Frame and Fork Dropout Alignment Gauge Set, FFG-2 from Park Tool](#)
 - [how to use it](#)
- I simply took measurements of the other one (it's a pair) & reproduced a plastic version
- this part is required to use the tool interchangeably between front & rear dropouts because OLD changes from 100 mm to 126-135 mm or thereabouts
- I don't know why the original needs to be knurled – the fit is quite loose & the spacer doesn't need to be rotated or really manipulated all that much, so I left it plain on the OD
