### StealthBurner cowling for KNOMI 2 With Rapido UHF Kumiko

This Fancy Kumiko SB Cowling was a special ask from a fellow Voron member and took quite a few hours to get the Kumiko pattern to follow the contours of the SB.

But the hard work has paid off well and this cowling looks absolutely stunning!

This will be a challenging print because of the fine detail in the Kumiko Pattern.

A 0.2-0.25 nozzle is recommended to get it to print.

But would be an excellent addition to my Kumiko Skirts.

if requested i can continue the pattern on the rest of the SB covers for that full Kumiko goodness!

as always with Voron Prints

4 perimeters

5 top / bottom layers

40% infill

but these are for 0.4mm nozzles so it would be advised to adjust these to match the reduce nozzle size.

0.2mm nozzle should be

8 perimeters

10 top / bottom layers

40% infill

feedback on this design would be gratefully received as I have not had a chance to test print this.

Happy Printing!
