Summary

I wanted a build plate cleaner that would slot into Gridfinity

[build](#) [gridfinity](#) [microfiber](#)

This is based on a microfiber cloth build plate cleaner I found, printed, and liked. The only issue was I could not find a Gridfinity version. I took inspiration from that build plate cleaner and made a couple of tweaks, but of course the biggest being it is now larger to fit a 4x4 Gridfinity space.

To cut a piece of cloth to the correct size, set the top and bottom pieces next to each other on top of the cloth you want to use, mark at the edges, then cut the cloth. If you want to keep the cloth from fraying, you can use a lighter or candle to melt the edges.
