updated 1. 7. 2024 | published 1. 7. 2024

Summary

I added a lid to make it a box, centered the charging port location, and changed one of the 18650 spots to a mouthpiece

[lobo](#)

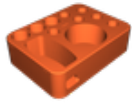

The three models are: the base, the lid, and a converted that will convert one of your 18650 slots to a mouthpiece slot just in case you have too many mouthpieces and not enough batteries, like me. You should only need to print 2 of these 3. Print the lid upside down, but that should be obvious. Let me know if you have any questions!
