Summary

I did what I must, because I can.

Back when it was first announced, my wife got one of the **NECA Portal Guns**, and while we were cleaning up this weekend she asked if I could make a small stand to stabilize it on the shelf. What I made is a just that - a small cradle that supports the device in a stable manner without being a full and complete display. It was fun getting the angle right 😊

The whole thing is built around FDM - it's 99% just six little loops. Prints quickly and easily. Set all your walls and such to 0.42mm (at least in Orca) and it'll slice evenly.

Wrap the top and bottom with a little **rug tape** and it's stable as a rock.
