I made this cup to hold poop bags because I use my electric scooter when I walk my dog. I'm disabled so can't walk far or often so I bought a two wheeled electric scooter for walking/running my dog. He seems to really like running beside me and it allows me to walk him further than I ever could without it. The only real problem was when he decided to take a dump in someone's yard. I could pick up the waste but getting the poop bags back home was a hassle. I designed this cup with a honeycomb bottom so it won't hold water in case of rain or if I have to rinse/wash it out and it's large enough to easily hold my 35# dog's bagged movements. There is an eyelet on the side for hanging a dispenser or for simply feeding a few bags through. So far it has worked wonderfully for me. I don't know if anyone else would be interested but here it is if you are. The only supports needed are printed in and they break out easily. Requires two M5x16 SHSC bolts and two M5 nuts for mounting.
