Every real angler knows the problem. You talk about your heroic fishing battles and the catch of the century.

Then some jackass asks about the size! Who cares about the size! Conventional measuring devices with their fantasy designations such as centimetres or inches can never do justice to the epic battle between fisherman and fish. Or the epic dimensions of the catch!

This problem is now a thing of the past - thanks to the unique and ultimate fish length measuring device. Simply hold the fish up to the measuring device and you immediately know the true dimensions of your catch! Objective, incorruptible and strictly scientific.

Silence the doubters!
