Welcome Cursive Sign for Letter Board

FLIP MODEL UPSIDE DOWN IN THE SLICER

Prints in one piece, which is nice because you don't need to individually push in the letters. Made in petg because that happened to be the only white filament I had. It would probably print better in pla. Your gonna need pretty good bed adhesion, you could try a raft but the first layer, the visible layer on the board, wouldn't be smooth. I wouldn't recommend a brim because the edges are going to be rough.
