It's just a simple multicolor INXS Keychain I designed for my father as a gift. I used this video (in spanish) as a guide to print it in one piece to ensure strength (third method/tercer metodo):

The STL is separated if someone wants to print the keychain using the first method in this video.

The slicer used was Prusaslicer, and carefully loaded each letter and star twice, one as a negative part for the keychain and the other to print it. No supports needed!
