Summary

6" aeroport for car audio uses.

[Gadgets](#) > [Audio](#)

Printed with Petg, 2-3 walls and 15% infill with 0.6mm nozzle

Fitment depends on you printers calibration.

90deg elbow is intended to be printed as 2 pieces and CA glued together for ease of printing, printed straight up or on the 45deg face both work fine with basic cooling.

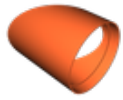

Would recommend inner/outer brims if you have any doubts about bed adhesion.

Sure couplers and such are missing, but made these for my use case.
