Hello, this is my first model, and the first version of the Compact Fishing Rod, which can easily fit inside your backpack or in your bait box. Its small model has a hole in the center, so that you can loop the string around and knot it, and ridges for your string to wrap around. I am still refining the model, please leave a like :)

The cap is OPTIONAL, you need magnets to stick it on.

The off-centered thread is on PURPOSE, so that there could be more string.

Scale the outside barrel to 1000%, the inside and the thread to 1000%, and the cap to 1060% for a product that is about 10 cm tall, 3 cm in diameter.

Build Plate Adhesion: No

Infill: Doesn't matter

Support: No (You have to flip the barrel so that the opening is on the top)
