### Summary

Replacement hydraulic lever knob for Gottwald cranes.

3D model designed by Sedowynt using Autodesk Fusion (360) Personal License. The knob has no thread, just glues or press-fits on. Make sure to sand and clean lever before installation. My settings were: 0.18 layer height, 50% infill, no supports and raft adhesion. The product in the picture was printed from PLA, which should hold up, albeit I would recommend something more resistant.
