Summary

If not using the originally specified btt36 board this helps giving a cleaner cable routing.

[3D Printers](#) > [Voron Parts & Upgrades](#)

Tags: [cable](#) [cablemanagement](#) [cablegland](#)

This part is for the H1T1 toolhead, if not using the originally specified btt36 board this helps giving a cleaner cable routing, Im using it with the Voron Trident cable gland mod to give a supported set of cables on both sides.

This remix is based on

T1H2 Printhead for MGN12 Rails / RatRig Vcore
