My table has a shallow edge, probably only about 1cm to 1.5cm, so I decided to do this simple remix.

It's a simple install with the original screws, I added two screw ports to hold it in place if you need better stability.(I've only used nails myself and they work just as well

You don't need to **add** screws. The model will snap in securely.( print in PLA

If you need a smooth edge to the model, you can go ahead and remix it :D

Feel free to add any suggestions and feedback
