This print handle comes with three level of teeth. The bottom teeth works for 1mm--21mm base, the middle teeth works for 21--41mm base, and the upper teeth works for 41--60mm base. The screw is kind of difficult to turn. But that means that the paint object is going nowhere but stay on the handle. The insert piece can be hammered into the hole.

My own version was printed using PETG with 15% infill 0.4mm nozzle and 0.2mm Quality. No support needed.
