This model was developed as a replacement for the broken component on a Yamaha FX model JetSki. This component was not available without purchasing the entire assembly. The original part number (for the entire component) is: F1X-6517C-00-00

This model replaces just the broken plastic component.

Will require support when and may take some tweaking due to the internal nature of the component and the ability to remove support.

I printed this in ABS and fitted the component and was working well.
