Hello there,

Isn't the Annoying PCB annoying enough for you?
Here, take the case and let your "victims" open the case first...

If you're expecting a design masterpiece, I'm sorry to disappoint you.
The simplest design with no frills.

I've made a small opening in the side so that you can turn the PCB on and off - I think the annoyed victims won't find the little switch...

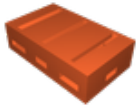

Before the top layer is printed, the printer pauses so that you can insert the Annoying PCB.

If you use the stl file - don't forget so set a pause manually

Used Annoying PCB Board → https://a.aliexpress.com/_EurzuVN

Hafe fun
