[lancable](#)

Covers the link/activity LEDs from a Router/Switch or other devices. It's ideal for Living or Bedrooms in which blinking LEDs are annoying.

Available in two sizes: small and wide

When unsure, please print the "TEST Print" profile first and try. Two covers from each size will be printed and you can check which one you need.

Print in PLA is fine. I recommend dark colours.
0.2mm layer, 100% infill

- It will fit on most Ethernet plugs
- Ports next to each other are not blocked.
