Welcome to Washington D.C.!

This model was created by **Alexis Hudson** @[alectrodesign](#)

In addition to looking great, this is also a beautiful **lamp** that can be lit from inside with **LED lights**!

The **White House** is the official residence and workplace of the president of the United States. Its address is 1600 Pennsylvania Avenue NW in Washington, D.C.

The residence was designed by Irish-born architect James Hoban in the **neoclassical** style, and built between 1792 and 1800. Several modifications and expansions have been made through out the years, both as a result of damage or simple need for more space. Additions include the semi-circular south portico, the north portico, the West and East wings, and colonnades connecting them (from [Wikipedia](#)). This model just depicts the main building, without the wings.

MiniWorld3D is happy to bring this historical model to life as a homage to all the people of the USA. Please give credit, it's all about spreading culture!
