This is press-fit, you will need to play with it a bit to find the right size. It's also possible to glue it in place - it's very unlikely that it will break, this is much sturdier than the original one.

STEP and F3D files included. In Fusion360 you can adjust the number of the knurls both vertically and radially, and also the depth of the knurls - check the parameters. The current settings are for FDM printers, I printed mine with a 0.4 nozzle, and it feels nice. But a lot less knurling than the original one.

Disassembly is easy, many videos on youtube

You don't need to take off the plastic from the column, just turn the wheel 90 degrees to remove the airbag

This one shows that part better:
