### Summary

This my daily driver, I moddified the middle section to fit some cash and improved the locking mechanism. F360 included.

This my daily driver, I moddified the middle section to fit some cash. The compartment can fit atleast three bills(1 left, 2right), and the coin cutout fits 2 Euro coin flush. The top section is ideal to bare contact data so someone can reach you if they found the wallet(customise this with the fusion archive). The second version of the middel section fits my housekey(RÜTÜ) I included it more as in inspiration, so u can edit the fusion file to fit your own. I also improved the locking mechanism to last longer and be more forgiving.

It should be really easy to print.

You will need 3 M3x6 for the edges and 1 M3x8 for the rotating shaft. **Also the lever for raising the card can be found in the original model by Glezz, this is needed for the assembly .**

I lined the middle section with tape, so the lose part wont rattle as much when you walk with the wallet in your pocket

I included a gladbach monogramm that I desigend for a friend, maybe you happen to like it:)

If you got any questions/ideas just comment them and please rate the print and post your makes
