updated 23. 12. 2022 | published 23. 12. 2022

Summary

Mounts an cheapo round hygrometer to the prusa mini. Ideal for use in an enclosure

[3D Printers](#) > [Accessories](#)

Mounts a cheapo round hygrometer to the prusa mini. Ideal for use in an enclosure.

Print instructions

Print it with the ring facing downwards. I used prusa orange PETG to match the color scheme.

Installation

You need a T-Nut (I used a printed one. e.g. <https://www.printables.com/model/61235-t-nut-25mm-m4-thread>) and a M4 20mm hex screw to mount it onto the extrusion.

additional notes

I'm interested in your feedback to improve my stuff! So give me likes, post makes, comment and rate the print to show others and me how well it goes.

If you post a make, let me know which filament you use.

If you want to support me by donating a coffee go to <https://ko-fi.com/antimaterie> I would really happy about it. The money will be invested in all stuff regarding 3d printing to give more and better quality models.

In general my Prints are not for commercial use, but if you are a print farm owner and want to sell some of my stuff, please contact me.

Hope you enjoy my models.
