## Summary

A bracket to better help attach .5" core to shield foam for a madu.

Tags: [bracket](#) [larp](#) [amtgard](#) [boffer](#) [madu](#)

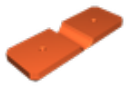

Attaches with M4 hex socket head bolts and uses captive nuts to make assembly easier. I have included the STEP file in case you'd like to modify the bracket to suit your needs.

Designed for .5" core - kitespar in my case.

### Installation steps:

1. determine where you'll place your brackets, mark foam.
2. Remove foam from shield blank.
3. Attach brackets to core. (You can wrap some string or a thin layer of foam (like foamies) to the section of the core you'll attach the brackets to in order to increase the tightness of the fit if needed - I used string in my case.)
4. Install brackets and affix with expanding glue.
