need some spareparts and LEGO® doesn't produce and sell them anymore .. so i have to find another way.. bricklink is much to expensive :-D

first i designed one with the pin inside and printed, but this breaks if you push it into an hole ... this one id designed to use an original LEGO® Technic Pin to connect .. that works fine for me ..

photos added later .. ^^

This is not an LEGO® Product and is not designed by LEGO® but you can use it with your EGO® Bricks you allready own. :-)
