### Summary

A double sided mount for the M99 frontlight to tighten it from 2 sides.

[m99](#)

I created the model to have a way cheaper mount than the original one and tighten the frontlight position from 2 sides to keep it from tilting on hits to the bike.

Print 2 parts:

Part 1 → 2 variations: one for a M5 heat insert, one for a nut

Part 2 → side to stick the screw through. should be a ~ 50mm long M5 screw

Tip: Use something like a rubber washer to increase friction between lamp and mount.

Have fun.
