I needed a dispenser for chlorine tablets for my pool. the one that came with my pool used only 1 inch pucks, and those were too small and were more expensive (as I was using 3 or 4 pucks every 2 days and could only buy smaller quantities at a higher cost per volume). I wanted to switch to the larger 3in chlorine pucks that were much cheaper (as I could buy those in larger volume). I looked at 3in floating dispensers and they were fairly expensive and I did not like that they floated around and did not stay by the pump outlet jet. I wanted a dispenser that would stay where the flow of water through the dispenser enabled the chlorine puck to dissolve at a higher rate and maintain a better level of chlorine in the pool. So this basket is what I came up with. It stays by the pump outlet jet and is simply clipped to the side of the pool using a couple small carabiner clips and a wire lanyard made from 18 gauge electrical wire that was adjusted to the depth required. It has been working great so far. I also included a basket where two pucks can be loaded at a time (for large pools or when you go away for a short holiday).
