Summary

Modified the portion of the design the drip tray sits on to make it more robust and stable

Tags: [ranciliosilvia](#) [rancilio](#) [gaggiuino](#)

The portion of the design that attaches to the machine is the same as the original from @legojoey17, but I created a new base for the drip tray to it on. The tapered design was chipping at the edges because it was so thin, so I created a more boxy shape and made it a little longer for better support. I also had some issues with the screw heads not sitting all the way into the holes because I print inside layers first, so I added some wiggle room for that

This remix is based on

Rancilio Silvia LoadCell Mount (slide-on; 10mm screw distance)
