### Summary

A small desktop Jack O'Lantern that can be fitted with a CR2032 button cell + LEDs to give off light.

I created this jack o'lantern following [this tutorial](#). Try making your own! Otherwise, feel free to try printing this one! Included are three files, two that form a stem and one that forms the pumpkin. The stem pieces slide together to keep them both easily printable, with the pocket piece sized to gently grip a CR2032 coin cell battery. LED legs with standard spacing also fit well on the battery, which allows for the lantern to be lit with minimal parts visible from the exterior!
