[swivelbase](#)

This is the sister design to my other swivel mount. This design is print in place and requires only the screws to mount it. The mount base is sized for #8 screws.

The files are designed in the proper print orientation and don't require support. The ring may have some loose strands from bridging. supports can be used if desired.

While this design does freely spin, it doesn't spin as well as the other design. However, this does not require the extra hardware and bearing.
