As much as I like digital, there is a time when you have to go back to analog, therefore, all my notes are in the same notebooks, I like the Leuchtturm1917 with points instead of lines or grids, comfortable to write and good size.

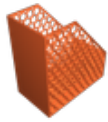

The point is that after using them, they are left there, and the truth is that I often need them for reference, so being able to have them more organized is a plus.

Designed to be printed without supports, and with honeycomb walls to use less filament.

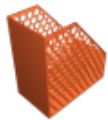

If you found this design useful or interesting, [maybe you want to buy me a coffee](#) (which is always appreciated), or download the design and give it a like (which helps collect Prusameters)

UPDATE: If the first version gives the impression of being very fragile, the second (v2 STL) is more reinforced and introduces a space for labeling.
