### Summary

A breeding cave for red lizard whiptails with removable caves.

[Household](#) > [Pets](#)

A cave I made for my Red Lizard Whiptails to breed in. The files are a housing for the caves and a cave file. You will need to print one housing and 8 caves for the full setup. There are "wings" on one side of the housing, this is meant to be put in the sand to keep the cave from moving. Although a bit expensive, I printed all of these parts with 100% infill to make sure there was no chance of it floating. This is probably a bit overkill and you could get away with maybe 6 walls and 50% infill, but your mileage may vary.

If you have any questions, please feel free to leave a comment.
