## Summary

Built this model to automatically catch egg scattering when fish spawn and transport eggs into separate tank.

[Household](#) > [Pets](#)

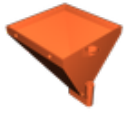

Built this model to automatically catch egg scattering when fish spawn and transport eggs into separate tank.

It works by hooking an airline up to the 4mm inlet and 10mm pipe up to holding tank.

It acts as a funnel for eggs when eggs are laid. Just add plants to the funnel to stimulate breeding.

Prints without supports if you have the funnel standing straight on print bed.
