My brother also have a P90 and really liked the Novritsch solution, we ordered a set from the SSR90 QD point, but it's counter part not included in the package:

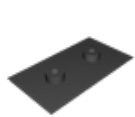

[SSR90 QD Points - Novritsch | Airsoft](#)

Print it from heat resistant and durable material, like ABS/ASA/PETG. Your expensive replica will be hanging on it. Simple PLA can't handle the heat of the summer games, and if overloaded it will snap without notice.

I printed one from special heat resistant and mechanically ABS like PLA (Aurapol HT110) but decided on PETG at the end.

After 2 game day it still hold without deformation so PETG is a safe pick.
To install you will need a 8,5 mm drill and 2pcs ISO M4 screw.
The thread is modelled into the holes.
