Summary

Diffuser for the Daybreak lights from Vector3D

[3D Printers](#) > [Voron Parts & Upgrades](#)

Tags: [lightbar](#)

The Daybreak has a different diffusion system, which my ptfe was hitting. This diffusion bar is much better in that regard. I had to remix because the screw was at the wrong spot.

I created 3 versions:

- 2mm thickness (original)
- 0.6mm thickness (3 layer)
- 0.4mm thickness (2 layer)

I used the 0.4 version with normal white PETG.

2024-07-14

I added two more files, with closed ends and counterbore for the screws.

This remix is based on

Daylight on a Stick Diffuser
