Summary

This mount for the Greddy Profec replaces the small storage hole next to the cigarette lighter in the car.

Looking for a clean way to install your GReddy Profec Boost Controller in your 94-99 Celica? Look no further.

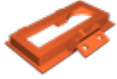

This mount uses the stock screw, screw hole and tabs for a flush perfect fit.

The Boost Control Interface friction fits into place. I have drop, swing, and pull tested to ensure it will not come loose. However, you can apply a small bit of E6000 if you wish.

As with all automotive accessories, things get hot. Blame global warming. For the best result, print using ABS. PETG will also work, but may warp over time if you live in a hotter climate.
