[fidgetknife](#)

I absolutely love the [OTF fidget knife](#) designed by uhltime but it didn't feel right in my hand because i would keep messing with the spring so the [closed case](#) made by Raskal was a good option but i wasn't able to see the mechanism and i really liked to be able to see it. So I modified the case to accommodate my need.

The only modification I made is purely esthetic and even if it's hollow it is still really sturdy.

I didn't alter any of the mechanical components. The case I modified is the guided one, but it should work normally too with a normal blade.

All the parts are compatible with the [closed case](#) by Raskal so you can mix them up to create something you like(:

Side note : there are 2 knives in the pictures because it was easier to see in brown but I didn't print the back open in the brown version so I add to show it with another one:)
