Summary

Remix adds a braced middle strut to the design, enhancing stability and reducing flex at higher leg

[Household](#) > [Office](#)

This remix of the Modular Monitor Stand/Riser introduces a braced middle strut for enhanced stability. The original design featured modular, dovetailed legs, which allowed for customisable leg heights and independent printing of components. Building on this, I have extruded the underside of the middle strut to fit between the bases. This added bracing significantly reduces flexing, particularly at higher leg lengths, ensuring a sturdier and more reliable monitor stand.

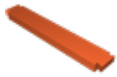

This remix is based on

Modular Monitor Stand/Riser
